

WHICH 3 COLOUR CARTRIDGE DO I NEED?

The original e-mark **Tri-Colour C1 cartridge** is brilliant for everyday use. As long as the cartridge is **inserted correctly**, and **regular cleaning** of the print-head is carried out, it will give around 5,000 clear prints before it will need replacing. This cartridge is ideal if you intend to use your e-mark several times a day.

After working with those in the craft industry, we found that generally crafters will use their e-marks less often than business users. This is usually down to project or creative requirements. In turn, less frequent use of the e-mark means that the original cartridge has more opportunity to dry out.

The new e-mark **Tri-Colour C2 ink cartridge** is made specifically with crafters and hobbyists in mind. The specially formulated ink means that your e-mark can be stored away for longer periods of time without drying out so quickly, it also means the print-head requires less cleaning, and because the quality of your prints won't be compromised, you no longer have to do test prints before you start creating.
